

Building a professional website to showcase your CCNA expertise is a great way to transition into consulting. Since you are working locally on your C drive, we will focus on a clean, responsive layout using HTML, CSS, and JavaScript.

To keep things organized, create three files inside your **C:\CCNA** folder: index.html, styles.css, and script.js.

1. The Structure (index.html)

This file defines the layout, including the login section, your profile, and the email portal.

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>CCNA Consultant Profile</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>

  <header>
    <div class="header-content">
      <h1>CCNA Professional & Consultant</h1>
      <div id="datetime"></div>
    </div>
  </header>

  <main>
    <!-- Login Section -->
    <section id="login">
      <h3>Client Login</h3>
      <form id="loginForm">
        <input type="text" placeholder="Username" required>
        <input type="password" placeholder="Password" required>
        <button type="submit">Access Portal</button>
      </form>
    </section>

    <!-- Consultant Profile -->
```

```

<section id="profile">
  <h2>Consultant Profile</h2>
  <p>Specializing in network design, subnetting, and Cisco infrastructure. Dedicated to helping businesses optimize their routing and switching environments.</p>
  <ul class="skills">
    <li>IPv4/IPv6 Subnetting</li>
    <li>Cisco Packet Tracer Lab Design</li>
    <li>VLAN & Trunking Configuration</li>
    <li>Routing Protocols (OSPF, EIGRP)</li>
  </ul>
</section>

<!-- Email Portal -->
<section id="contact">
  <h3>Contact Me</h3>
  <form action="mailto:your-email@example.com" method="post" enctype="text/plain">
    <input type="text" name="name" placeholder="Your Name" required>
    <input type="email" name="email" placeholder="Your Email" required>
    <textarea name="message" placeholder="How can I help with your network?"
rows="5"></textarea>
    <button type="submit">Send Message</button>
  </form>
</section>
</main>

<script src="script.js"></script>
</body>
</html>

```

2. The Styling (styles.css)

This will give your site a professional, "tech-focused" look with a clean dark-themed header.

CSS

```

body {
  font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
  line-height: 1.6;
  margin: 0;
  background-color: #f4f4f9;
  color: #333;

```

```
}
```

```
header {  
  background: #2c3e50;  
  color: #fff;  
  padding: 1rem 0;  
  text-align: center;  
  border-bottom: 4px solid #3498db;  
}
```

```
#datetime {  
  font-size: 0.9rem;  
  color: #bdc3c7;  
}
```

```
main {  
  max-width: 800px;  
  margin: 20px auto;  
  padding: 20px;  
}
```

```
section {  
  background: #fff;  
  margin-bottom: 20px;  
  padding: 20px;  
  border-radius: 8px;  
  box-shadow: 0 2px 5px rgba(0,0,0,0.1);  
}
```

```
h2, h3 {  
  color: #2c3e50;  
}
```

```
input, textarea {  
  width: 100%;  
  padding: 10px;  
  margin: 10px 0;  
  border: 1px solid #ccc;  
  border-radius: 4px;  
  box-sizing: border-box; /* Ensures padding doesn't affect width */  
}
```

```
button {
```

```

background: #3498db;
color: white;
padding: 10px 20px;
border: none;
border-radius: 4px;
cursor: pointer;
}

button:hover {
background: #2980b9;
}

.skills {
list-style: none;
padding: 0;
display: grid;
grid-template-columns: 1fr 1fr;
}

.skills li::before {
content: "✓ ";
color: #27ae60;
}

```

3. The Logic (script.js)

This handles the real-time date and time display.

JavaScript

```

function updateTime() {
const now = new Date();
const options = {
weekday: 'long',
year: 'numeric',
month: 'long',
day: 'numeric',
hour: '2-digit',
minute: '2-digit',
second: '2-digit'
}

```

```
};  
document.getElementById('datetime').innerHTML = now.toLocaleDateString('en-US', options);  
}  
  
// Update clock every second  
setInterval(updateTime, 1000);  
updateTime();  
  
// Simple Login Alert  
document.getElementById('loginForm').addEventListener('submit', function(e) {  
    e.preventDefault();  
    alert('Login functionality requires a backend server. This is a front-end demonstration.');
```

Next Steps for Your Consultant Brand:

- **Case Studies:** Since you have extensive experience in technical support, add a section specifically for "Past Projects" to show how you've solved complex networking issues.
- **Documentation:** As you study for your CCNA, you can host PDF guides or "Cheat Sheets" you've created (like Subnetting charts) in your CCNA folder and link to them on the site.
- **Testing:** To view your site, simply double-click the index.html file in your C:\CCNA folder. It will open in your default web browser.
